

LGC-8 Gas Assist Controller Module

- Reliable
- Accurate
- Flexible
- User Friendly

The LGC-8 Series Gas Assist Controller is Alliance's 3rd generation process controller, enhanced even over its predecessors with greater flexibility, real-time trend graphing, simplified screens and the ability to store process menu programs. Known for its reliability and precision, the heart of the Alliance system continues to offer options exclusive to the Alliance line of equipment, including Multiple Setup Control and Auxiliary Process Control.

Features:

- Digital pressure and time control
- 2 and 4 Valve standard configuration
- 8 Available time and pressure phases
- Real-time trend graphing
- Digital pressure ramping
- User friendly touchscreen
- Pressure control to 8,000 PSI
- Compatible with any high pressure nitrogen source
- Flexible lease options available
- Process menu storage
- Includes installation and startups
- Optional; auxiliary process control – multiple set up control
